THIS IS UNEVALUATED INFORMATION FOR THE RESEARCH
USE OF TRAINED INTELLIGENCE ANALYSTS 50X1-HUM

1. The power station at Armavir (44°58'N, 41°05'E), in the Caucasus, is located 12 kms. east of the town. In 1947, five thousand PWs were working on the plant, which was to have an output of 100,000 kilowatts by 15 August 1947. Five generators were in use and half the planned amount of current was being produced. The construction was to be completed by the end of 1947. The ultimate destination of the power developed is unknown, though it is believed that it is led off from Armavir to a coal and ore mine some 80 kms. distant.
2. In January 1947, a new power station at Oster (50°57'N, 30°52'E), Ukraine, on the lower reaches of the Dnna River, was completed. A dam 80 meters high was constructed on the river and the water was led off to the power station, which has a capacity of 900,000 KW. In July 1947, the dam burst and work was held up for some weeks.
